

NutriHold Organic

“Active Carbon”

Repeated applications of Fertilizers, Pesticides and Fungicides will, over time, contribute to a depletion of the Carbon and a degradation of the biology that resides in soil.

Adding an Active Carbon as a part of your nutritional program will have multiple benefits:

NutriHold Organic will:

- Provide Carbon to feed soil biology
- Add beneficial biology *Bacillus subtilis* and *Bacillus pumilus*
- Restore a healthy balance to soil biology.
- Good biology always outcompetes pathogens when fed properly
- Microbe waste byproducts are acidic, which lowers bicarbonates
- Works across a broad range of pH's
- Build back Organic Matter in soil
- Improve water-holding capacity of sandy soils
- Improve soil structure of clay based soils
- Increase CEC of soils
- Hold nutrients in the root zone
- Chelate macro and micro elements
- Increase the efficacy of pesticides and fungicides

NutriHold Organic which is sourced from a high fixed carbon deposit, uses a patented cold-water extraction process to ensure that when it is added to the soil it is conducive to be immediately reactive.

NutriHold Organic is the only Active Carbon product that contains live Bacteria and Fungi, Humic Acid, Fulvic Acid, Organic Matter as Carbon and Trace Nutrients.
