

NutriHold Organic

NurtiHold Organic is the only Biologically Active Carbon, multi-functional product, that contains Humic Acid, Fulvic Acid, Organic Matter as Carbon and Biological Species Both Bacterial and Fungal.

Our Biologically Active Carbon products are being used in Agriculture, Horticulture, Turf and especially in Citrus where it is a key component of the Maury Boyd Nutritional Program.

Benefits & Features

- Increased CEC
- Chelating Nutrients
- Contains *Bacillus subtilis* and *Bacillus pumilus*
- Adds Biologically Active Carbon
- Improves Soil Conditions
- Increases Yields
- Increases Health and Vigor
- Better Root Systems
- Buffers Salt in Irrigation Water
- Reduced Transplant Shock
- Adds Humic Acid
- Adds Fulvic Acid
- Adsorbs Excess Chemicals in Soils
- Beneficial Biological Species
- Increases Environmental Stress Tolerance
- Tank Mixes well with Nutritional

We harvest a unique Carbon based Humate from our surface deposit. Since our resource is a geologically young Humus deposit, there is a diverse biological population that thrives and continually cycles our raw materials into Humus.

We use a patented cold-water extraction process to produce our liquid product lines from the dry material we harvest. Due to our manufacturing process, our indigenous biology survives production and is viable in our different products.
